Education

2021-2025 **B.Tech, Electronics and Computer Engineering**, *Amrita Vishwa Vidyapeetham*, Kerala, India, CGPA-**9.26/10** The language of instruction is English.

Publications

ICVGIP 2025 What is there in an Indian Thali?
[Y Arora](#), A Arun, CV Jawahar

ICCCNT 2025 HealthGuard AI: Predictive Diagnosis and Smart Care Solutions
[Y Arora](#), H Rohra, D Das, S Uppaluru, M Rashmi

Achievements

- **3rd Position**, NTIRE 2024 Blind Compressed Image Enhancement Challenge

Internship

Feb 2025 - **The Centre for Visual Information Technology (CVIT), IIIT Hyderabad**, *Research Fellow*
Current Mentored by Prof. C.V. Jawahar

- Contributed to a project on Zero-Shot Recognition and Segmentation of Indian food items for automated nutrition estimation in culturally diverse meals.

Jun 2024 - **Computational Imaging Lab (CI Lab), IIT Madras**, *Research Intern*

Aug 2024 Mentored by Prof. Kaushik Mitra

- Contributed to a project on Image Deflaring using advanced Vision Mamba models, addressing imaging challenges such as flare artefacts.
- Enhanced image clarity by experimenting with and fine-tuning deep-learning models tailored for real-world applications.

Relevant Coursework

CS231n Deep Learning for Computer Vision by Prof. Fei-Fei Li, Stanford University

CS50 Introduction to Computer Science by Prof. David J. Malan, Harvard University

18.06 Linear Algebra by Prof. Gilbert Strang, MIT

Coursera Machine Learning by Prof. Andrew Ng, Stanford University ([Coursera Certificate](#))

Coursera Deep Learning by Prof. Andrew Ng, Stanford University ([Coursera Certificate](#))

Technical Skills

Frameworks PyTorch, TensorFlow, Django, Flask, Flutter, FastAPI

Projects

UnifyFormer, [\[link\]](#)

- An advanced architecture for blind image compression, utilizing innovative UnifyBlocks to enhance self-attention mechanisms. This architecture captures and leverages both global and local context information, leading to superior image reconstruction quality.

Computer Vision Models, [\[link\]](#)

- This project encompasses the implementation from scratch of several prominent SOTA Computer Vision models, including ResNet, EfficientNet, MobileNetV2, ResNeXt, GoogLeNet, VGG, and ViTs.
- These models are trained on the CIFAR-10 and CIFAR-100 dataset, and their performance is benchmarked against the original results as presented in their respective research papers.
